### DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/23/10 has been entered.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-9, 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown et al. (U.S. Patent 6,304,232).

As to claims 1-9, 12, Brown et al. discloses a transponder (column 1, line 6) as shown in figure 3 comprising:

an integrated circuit, IC (306) mounted on a circuit board (302); and

an antenna (360), which is a coil **electrically connected** to said integrated circuit (306) via a detachable connection (the end of the antenna 360 is electrically connected

Art Unit: 2835

to the component 306 via by trace 310), the antenna (360) is movable related to the IC (306) without interrupting said electrical connection (claim 2),

wherein said electrical connection is at least partially implemented by conductive end (352a), the end is free or comprises at least one intermediate connecting element (342) and said intermediate connecting element (342), which is a circuit board comprising at least one fastening element (the fastening element which is/are solder to connect the antenna to the circuit board 302 and through holes having trace 310 on the board 302), the circuit board (302) having contacts or trace 310 for making electrical contact to the antenna (360).

### ***Allowable Subject Matter***

3. Claims 10-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Response to Arguments***

4. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Dinh whose telephone number is 571-272-1929. The examiner can normally be reached on M-F.
